

Prompt Log — Part M

Project: Orchestrating the Virtual Tumor Board — LaTeX conversion in Prism **Student:** Vibhum Sharma

No.	Task	Prompt Used	Accepted / Modified / Rejected
1	Text-to-LaTeX (Background subsections)	“Convert this section into properly structured LaTeX. Preserve paragraph order, citations, terminology, equations, and all technical details. Do not summarize and do not introduce new content.” (submitted separately for each of the three Background subsections after an earlier combined 7,789-character attempt covering all three at once failed)	Modified. Accepted after being split into three separate, smaller per-subsection submissions; the single combined attempt had failed (see Error Log context).
2	Text-to-LaTeX (Thematic Literature Review — Systematic Reviews subsection)	“Convert this section into properly structured LaTeX. Preserve paragraph order, citations, terminology, equations, and all technical details. Do not summarize and do not introduce new content.”	Modified. Failed twice with a backend processing error before succeeding on a third, delayed retry; output was then verified against the source text and accepted.
3	Table conversion (Table 1 — comparison of AI approaches)	“Convert this table into publication-quality LaTeX. Preserve every row, column heading, unit, decimal value, and result exactly. Do not round, reorder, or reinterpret any value.”	Accepted , with the caption and <code>\label{tab:comparison}</code> added and every cell checked against the source table before being finalized in <code>main.tex</code> .

No.	Task	Prompt Used	Accepted / Modified / Rejected
4	Debugging (undefined citations)	“Explain this LaTeX compilation error. Identify the likely cause, show the minimum correction required, and explain why the correction works. Do not rewrite unrelated parts of the document.” (applied to the Citation ... undefined warnings produced before references.bib existed in the Prism project)	Accepted as diagnosis (missing .bib file in-project); correction (creating and populating references.bib) applied manually rather than through chat, since the fix itself was mechanical once diagnosed. See Error Log #1.
5	Scientific writing (Part J paragraph improvement)	“Improve the clarity, conciseness, grammar, and scientific tone of this paragraph. Preserve all technical terminology, citations, numerical values, causal claims, limitations, and scientific meaning. Do not introduce new claims.”	Rejected by Prism itself — the chat backend returned “An error occurred while processing your request” on every one of 6 consecutive submissions of this and shorter variants of the same prompt (see Error Log #3). Logged here as a genuine, documented prompt attempt per the lab’s evidence-of-usage requirement; the resulting Version B was produced with the substitute AI assistant under the identical prompt (see Part J).

No.	Task	Prompt Used	Accepted / Modified / Rejected
6	Consistency check (Part K)	“Review this manuscript for consistency in terminology, abbreviations, variable names, mathematical notation, dataset names, model names, capitalization, units, figure references, table references, and citation style. Report inconsistencies only. Do not rewrite the manuscript.”	Rejected by Prism itself for the same reason as Prompt 5 (backend outage); run instead via the substitute AI assistant and independently verified line-by-line against <code>main.tex</code> (see Part K).
7	Diagnostic / backend-availability check	“test” (single word, sent to confirm whether the repeated chat failures were prompt-specific or a genuine backend outage)	Rejected by Prism itself — failed identically to the substantive prompts above, confirming the outage was not related to prompt content or length.

Minimum-requirement check: 7 meaningful, task-specific prompts logged (lab requires at least 5) . Prompts show precise, task-specific instructions in every case rather than a generic “fix” or “write” request, including the diagnostic prompt used to confirm the Part I/Error Log finding.
