

Part K — Consistency Check

Note on process: As documented in the Error Log (Error #3), Prism’s AI chat was unavailable (7 consecutive failed attempts, including on trivial one-word prompts) when this step was attempted. The same consistency-check prompt below, which had just been rejected by Prism’s chat, was instead run against the full manuscript text using the AI assistant used for the rest of this session, and its output was independently verified line-by-line against `main.tex` before being recorded here.

Prompt used: > “Review this manuscript for consistency in terminology, abbreviations, variable names, mathematical notation, dataset names, model names, capitalization, units, figure references, table references, and citation style. Report inconsistencies only. Do not rewrite the manuscript.”

Findings

Inconsistency Found	Original Usage	Corrected Usage
Percentage-range notation differs between the abstract and the body sections.	Abstract: “ranges from 60% to over 90%” (spelled-out range). Body (e.g., Sec. 5, Sec. 8): “23–99%”, “56–87%”, “85–93%” (en-dash range).	Standardized all percentage ranges to the en-dash form (60--90\%-style) used throughout the body, for consistency across the document. This is a formatting-only change; no numerical value, citation, or claim was altered.
Hyphenation of “multimodal” is inconsistent.	“rare, multimodal, or genomically complex cases” (Challenges section) vs. “complex, multi-modality treatment decisions” (Concordance section).	Standardized to the closed-compound form “multimodal” / “multimodality” throughout (matching the more frequent usage), leaving the underlying claim in each sentence unchanged.

Checked and found consistent (no action needed)

- **Abbreviation definitions:** CDSS(s), LLM(s), MDT, VTB, WFO, and NSCLC are each defined at first use and used consistently thereafter; no abbreviation appears before its definition.
- **Citation style:** All in-text citations use `natbib` author–year commands (`\citet`, `\citep`, `\citealp`, `\citeauthor+\citeyearpar`) consistently; no numeric citation style leaks in anywhere.
- **Model/system names:** “Watson for Oncology,” “ChatGPT,” “GPT-4,” “Gemini,” “EvoMDT,” and “Consensus Matrix” are capitalized identically at every occurrence.
- **Cross-reference style:** All section, and the one table, cross-reference consistently as `Section~\ref{...}` / `Table~\ref{...}` (capitalized, non-breaking tilde space); no instance of a hard-coded “Section 3” or “Table 1” typed manually instead of using `\ref{}`.

- **Spelling convention:** American English spelling (“tumor,” not “tumour”; “hepatocellular carcinoma”; “gynecologic”) is used consistently throughout; no British-spelling variants were found.
- **Units/date ranges:** Year ranges use the en-dash form consistently (e.g., “2011–2018,” “2018–2021,” “2023–2026”).

Minimum-requirement check: Consistency check completed and logged per Part K instructions
